Brief Description

Lovelle is a multi-page website for discovering romantic comedies and timeless love stories. Visitors can browse movie and TV show catalogs, search and filter by genre, view title details, save favorites to a personal list, and contact the site team. The site is built with HTML, Tailwind CSS and vanilla JavaScript and works on both desktop and mobile screens.

Structure

- **Five linked pages:** index.html (Home), movies.html (Movies), tvshows.html (TV Shows), mylist.html (My List), and contact.html (Contact), all connected through the same navigation bar.
- **Shared script:** script.js provides the interactivity used across the pages.
- **Common page layout:** Every page has the Lovelle logo and navigation bar at the top, followed by a page title and description, then the main content (carousel and rows, card grid, saved list, or contact form).
- **Shared components:** Poster cards, the detail modal, and the "+ My List" button are reused across pages.

Features

- **Hero carousel** with auto-play, arrows, and dot indicators on the Home page.
- **Trending rows** for movies and TV shows with horizontal scroll controls.
- **Search and genre filter** (All, Rom-Com, Comedy, Drama) with a "No movies found" empty state.
- **Detail modal** showing poster, rating, year, runtime, genres, synopsis, and cast.
- **+ My List:** add titles with "+ My List" (the button changes to "Added to List"), remove them with the trash icon, and see an empty-list message with browse shortcuts.
- **Contact form** with real-time validation, plus an FAQ accordion.
- **Responsive design** with a hamburger menu and resized layouts on mobile screens.

Page-by-Page Details & Screenshots

1. index.html (Home Page)

- **Hero Carousel:** Full-width featured rom-com banner rotating through titles such as *Sleepless in Seattle*, *Friends and Notting Hill*), each with a background poster image, a badge (e.g., “Classic Rom-Com,” “Award Winner”, “Iconic Series”), title, star rating, release year, runtime, genre tags, synopsis, and an “+ My List” button. Includes previous/next arrows and dot indicators.

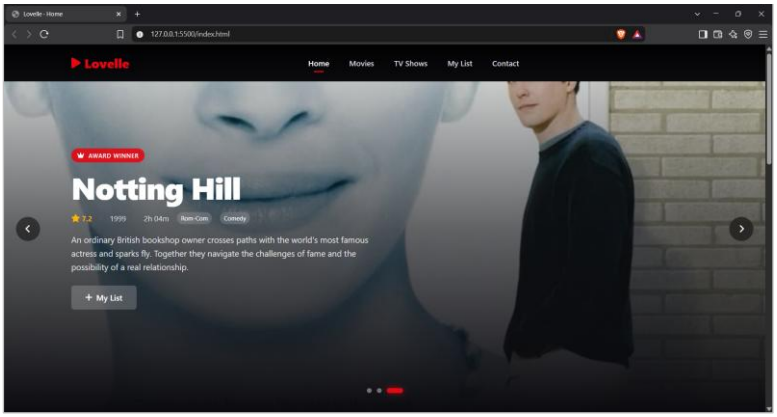

Figure 1. Home page hero carousel

- **Horizontal Scroll Rows:** “Trending Movies” and “Trending TV Shows” sliders showing poster cards with rating badges, titles, year, and genre. Each row has left/right scroll arrows and a “View All” link.

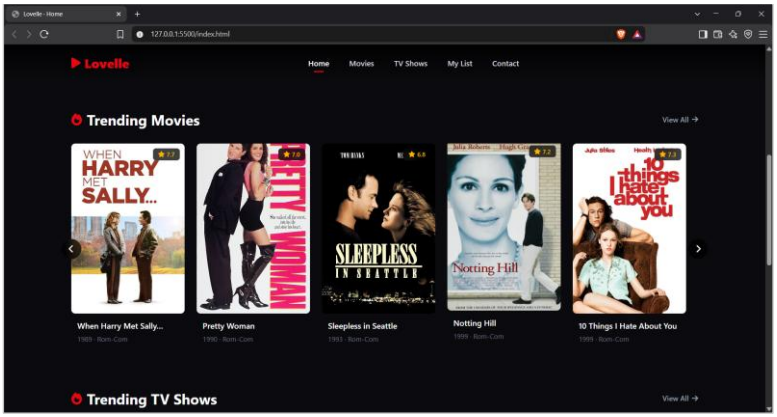

Figure 2. Trending Movies row with scroll controls

- **Detail Modal:** Clicking any card opens an overlay with the poster, title, rating, year, runtime, genre tags, synopsis, cast list, an "+ My List" button, and a close button.

Figure 3. Movie detail modal (When Harry Met Sally…)

- **Adding to My List:** Clicking "+ My List" saves the title and the button changes to "Added to List". The saved title then appears on the My List page.

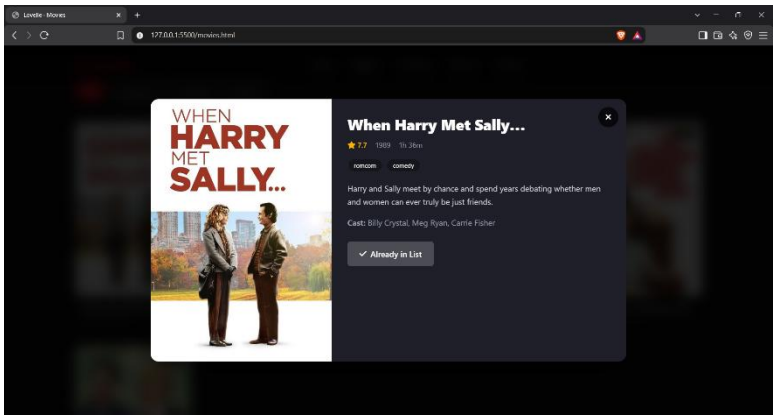

Figure 4. Detail modal after adding a title ("Added to my list")

- **Header:** Navigation bar with the Lovelle logo and links to Home, Movies, TV Shows, My List, and Contact; the active page is underlined in red.

- **Responsive Mobile Layout:** On phone-sized screens the navigation collapses into a hamburger menu that opens a dropdown with all page links, the hero banner scales to fit the screen, and the movie and TV rows resize to fit the narrower width.

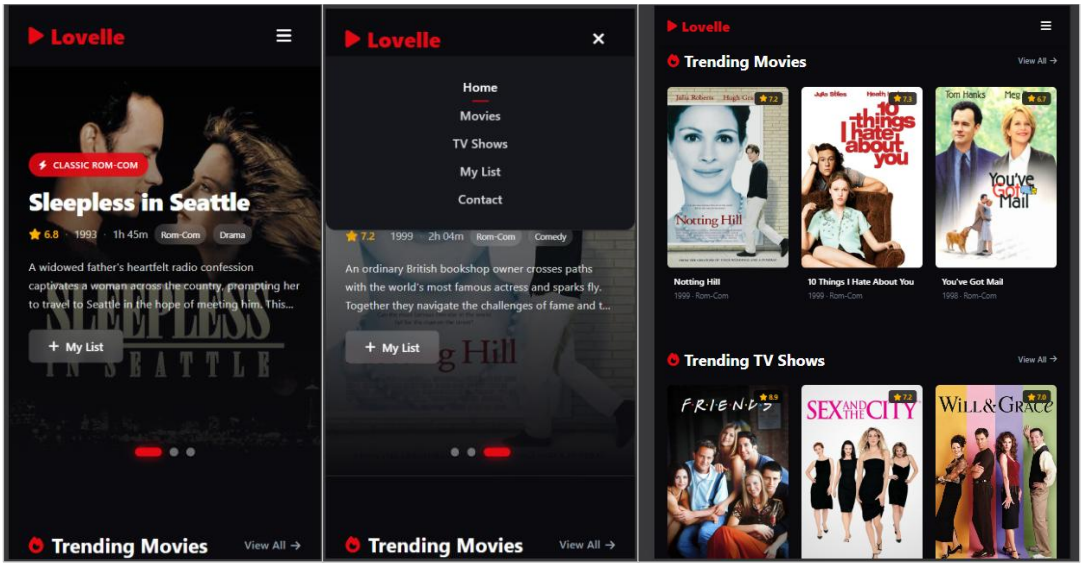

Figure 5. Mobile view: hero carousel (left), open navigation menu (center), trending rows (right)

2. movies.html (Movies Catalog)

- **Search & Filter:** Search bar for real-time title queries and genre filter buttons (*All*, *Rom-Com*, *Comedy*, and *Drama*). The active filter is highlighted in red.

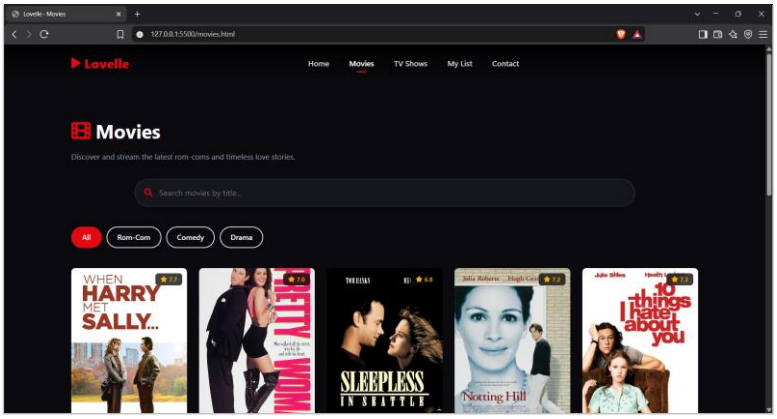

Figure 6. Movies page with search bar, genre filters, and grid

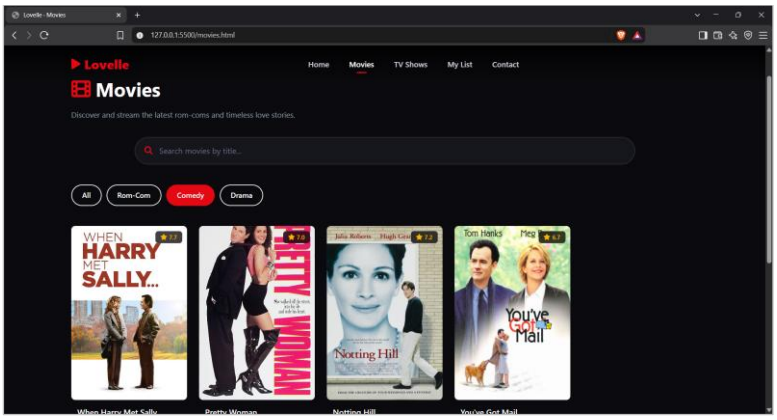

Figure 7. "Comedy" filter applied

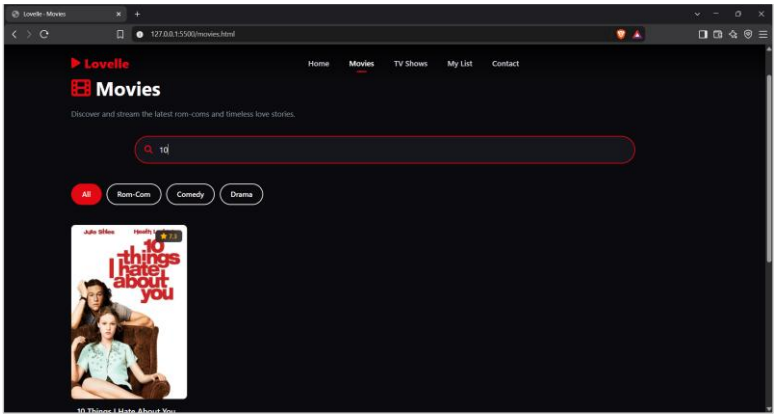

Figure 8. Search for "10" returns a single match

- **Grid View:** Responsive grid of movie cards displaying posters, star ratings, titles, release years, and genres. Clicking a card opens the detail modal.
- **Empty State:** A "No movies found" message with the hint "Try a different search term or genre." appears when the search and genre filter have no matches.

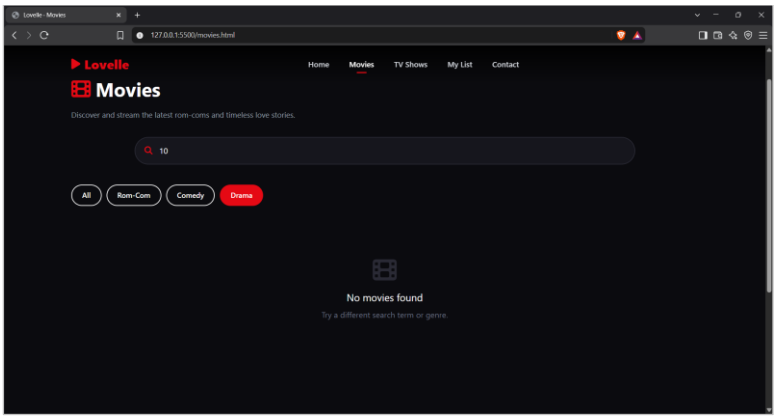

Figure 9. Empty state (search "10" combined with the Drama filter)

3. tvshows.html (TV Shows Catalog)

- Shares the layout of movies.html (search bar, genre filters, card grid), adapted for television series such as *Friends*, *Sex and the City*, *Will & Grace*, *How I Met Your Mother*, and *Ugly Betty*.

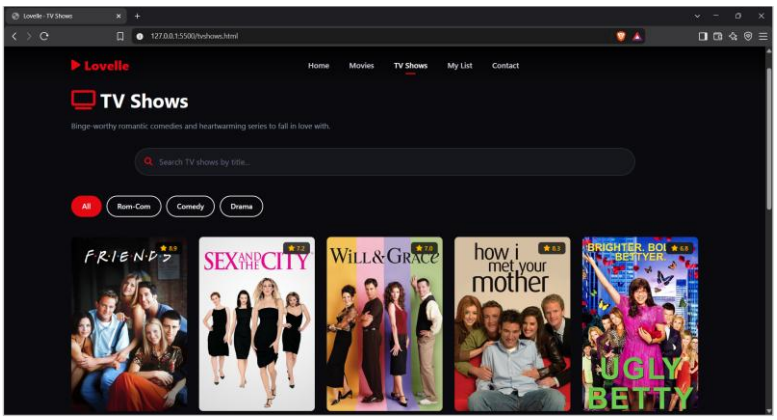

Figure 10. TV Shows page

4. mylist.html (User Saved List)

- Displays saved movies and TV shows as cards with a trash icon button on each card to remove it from the list.

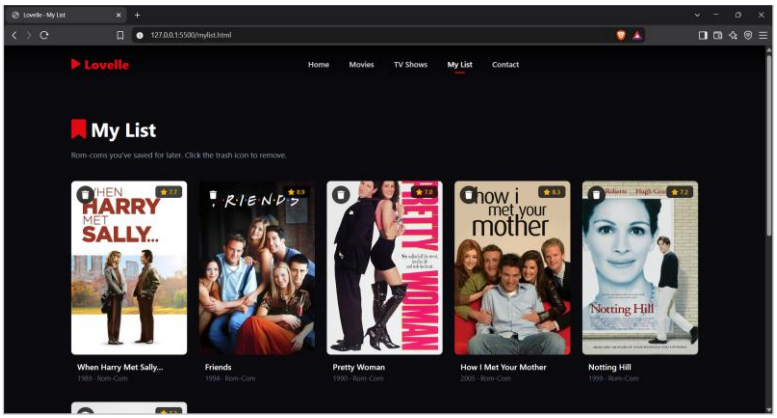

Figure 11. My List with saved titles

- Shows a “Your list is empty” state when no titles are saved, with “Browse Movies” and “Browse TV Shows” buttons.

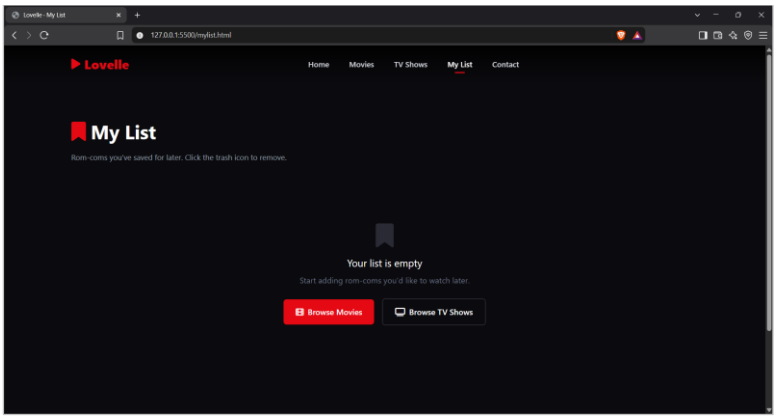

Figure 12. My List empty state

5. contact.html (Contact & Support)

- **Contact Info & Form:** “Let’s Talk” section with email, phone, and address (Impig, Sipocot, Camarines Sur, Philippines), plus a contact form (Full Name, Email, Subject, Message) that validates input in real time.

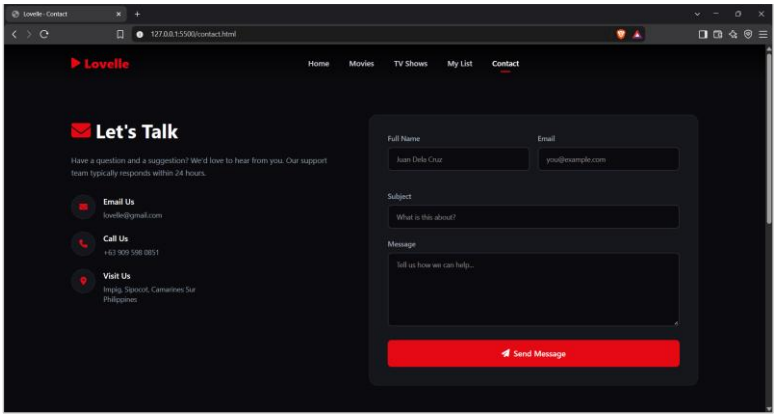

Figure 13. Contact page

- **Form Validation:** Invalid fields are outlined in red with messages such as “Please enter your name (min 2 characters),” “Please enter a valid email address,” “Subject must be at least 3 characters,” and “Message must be at least 10 characters.”

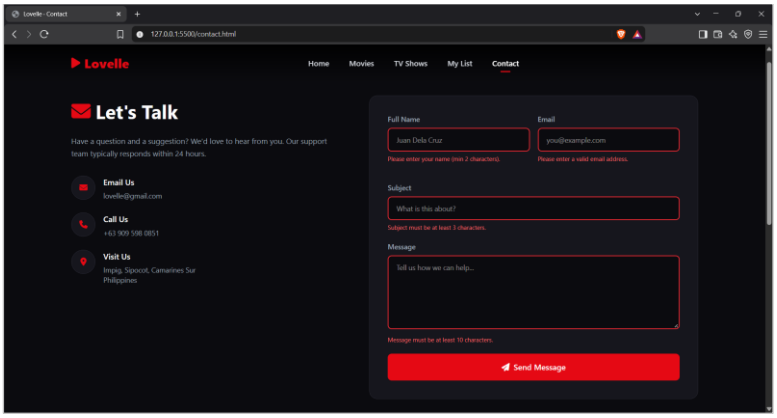

Figure 14. Contact form validation errors

- **FAQ Accordion:** Collapsible “Frequently Asked Questions” covering what Lovelle is, how to add titles to My List, how often new rom-coms are added, how to search by title or genre, and how to suggest a rom-com to feature.

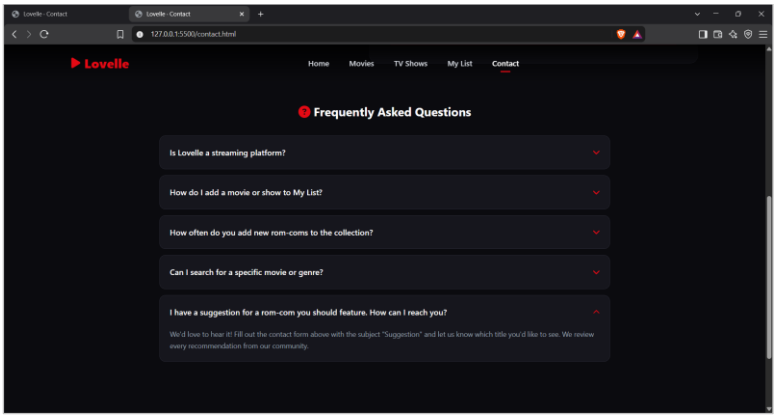

Figure 15. FAQ accordion with one answer expanded

JavaScript Implementation (script.js)

The features listed above are implemented in script.js through the following modules:

- **Style Injection:** Dynamically adds core CSS rules and animations (e.g., card removal transitions, scrollbar hiding) directly to the document head.
- **Responsive Navbar (Navbar):** Controls mobile menu toggling, switching icons, and opening a dropdown overlay.
- **Hero Carousel (HeroCarousel):** Manages smooth slide transitions (fade effect), active dot indicators, auto-play intervals (6 seconds), and manual prev/next button controls.
- **Row Slider (RowCarousel):** Handles touch/button horizontal scrolling across media rows with responsive card width adjustments.
- **Search & Genre Filter (SearchFilter):** Filters grid elements dynamically according to live search text input and active genre selection.
- **Detail Modal (Modal):** Opens a detail overlay when clicking any media card, populating title, poster, rating, cast, duration, release year, genres, and synopsis.
- **Item Removal (RemoveItem):** Handles card deletion on mylist.html with scale/fade CSS animations, triggering an empty state message if all cards are removed.
- **Accordion (Accordion):** Toggles collapsibles in the FAQ section with dynamic height calculation and icon rotation.
- **Form Validation (ContactForm):** Validates form fields (Name, Email regex, Subject, Message) and displays error highlights or success confirmations upon submission.

AI-Generated Code

- We scanned our files using Copyleaks AI Detector. The results show that our HTML pages are 50% Human, 47% Mixed, and 3% AI, while our JavaScript file is 59% Human, 34% Mixed, and 7% AI. This brings our total average to 51.1% AI-assisted code.
